Hybrid Remote

[ProjectDescription]

A global team of alternative investment managers passionate about delivering uncommon value to our investors and shareholders. With over 30 years of proven expertise across Private Equity, Credit and Real Estate, regions and industries, we're known for our integrated businesses, our strong investment performance, our value-oriented philosophy - and our people.

[Responsibilities]

" Member of the Business Data Engineering team, work to deliver Data Ingest/Enrich Pipelines, and Access APIs using common cloud technologies.

" Work with consumers to understand the data requirements and deliver data contracts with well defined SLIs to track SLA agreements.

" Harness modern application best practices with code quality, API test Coverages, Agile Development, DevOps, and Observability and support.

" Maintain programming standards and ensure the usage of the pattern / template for API Proxy.

" Conduct code reviews and automatic test coverage

" Standardize the CI/CD setup for API management tools and automated deployment.

" Utilize problem-solving skills to help your peers in the research and selection of tools, products, and frameworks (which is vital to support business initiatives)

[MandatorySkills]

- " 5+ years of proven industry experience; bachelor's degree in IT or related fields
- " Hands-on development expertise in Snowflake, Python, SQL, Spark, Kafka, Azure (ADF, Databricks and others)
- " Experience working in cloud data platforms such as Yellowbrick, Singlestore, GBQ
- " Understanding of Databases, API Frameworks, Governance Frameworks, and expertise in hosting and managing platforms like: Hadoop, Spark, Kafka, BI Tools like Tableau, Alteryx, Governance Tools like Callibra, Soda, Amazon DeeQu
- " Strong understanding of Twelve-Factor App Methodology

[SubsectionA]

- Detailed knowledge of API and integration design principles.
- Hands-on experience with web technologies.
- Design object-oriented, modularized, clean, and maintainable code and creating policies in Python.

[SubsectionB]

- Experience with test-driven development and API testing automation.
- Demonstrated track record of full project lifecycle and development.

[SubsectionC]

- Hands-on experience in designing and developing high volume REST using API Protocols and Data Formats.

[NiceToHaveSkills]

- " Financial experience: Public and Alternatives Asset Management
- " Familiar in NoSQL\NewSQL databases

[SubsectionD]

- Working with Azure API and DB Platforms.

[SubsectionE]

- Strong documentation capability and adherence to testing and release management standards.
- Design, development, modification and testing of databases designed to support Data Warehousing and BI business teams.

[SubsectionF]

- Familiarity with SDLC methodologies, defect tracking (JIRA, Azure DevOps, ServiceNow etc.)
